

Business Analytics Dashboard Guide

Synthetic sample knowledge-base document for local RAG testing

Overview

Sample dashboard design concepts covering KPIs, filters, drilldowns, data freshness, and usability.

Key Information

1. A KPI should have a clear definition, owner, calculation method, and business purpose.
2. Filters should make it easy for users to explore a consistent dataset without changing metric definitions.
3. Data freshness should be displayed or documented when it affects decision-making.
4. Dashboards should prioritize the most important decisions rather than displaying every available metric.

RAG Test Notes

This document is intentionally concise and contains distinctive terms so that semantic retrieval can identify it when a user asks a related question. It is sample content and should not be treated as professional, legal, medical, financial, or regulatory advice.
