

Cloud IAM Best Practices

Synthetic sample knowledge-base document for local RAG testing

Overview

A sample guide to identities, roles, service principals, managed identities, and least privilege.

Key Information

1. Least privilege means granting only the permissions required for a task.
2. Service identities allow applications to authenticate without using a human user's credentials.
3. Managed identities reduce the need to store long-lived credentials in application configuration.
4. Permissions should be reviewed periodically and removed when no longer needed.

RAG Test Notes

This document is intentionally concise and contains distinctive terms so that semantic retrieval can identify it when a user asks a related question. It is sample content and should not be treated as professional, legal, medical, financial, or regulatory advice.
