

Cybersecurity Awareness Guide

Synthetic sample knowledge-base document for local RAG testing

Overview

Everyday security practices for phishing, passwords, devices, data handling, and incident reporting.

Key Information

1. Phishing messages often create urgency and ask recipients to click links or disclose sensitive information.
2. Strong unique passwords and multi-factor authentication reduce account compromise risk.
3. Sensitive data should be shared only through approved systems and with authorized recipients.
4. Suspected security incidents should be reported promptly through the organization's incident channel.

RAG Test Notes

This document is intentionally concise and contains distinctive terms so that semantic retrieval can identify it when a user asks a related question. It is sample content and should not be treated as professional, legal, medical, financial, or regulatory advice.
