

Lakehouse Architecture Guide

Synthetic sample knowledge-base document for local RAG testing

Overview

A sample overview of lakehouse architecture, bronze/silver/gold layers, and governance.

Key Information

1. A bronze layer commonly preserves raw or lightly processed source data.
2. A silver layer typically applies cleaning, standardization, and business-level transformations.
3. A gold layer provides curated datasets for analytics, reporting, or downstream applications.
4. Governance should address access control, lineage, quality, retention, and data ownership.

RAG Test Notes

This document is intentionally concise and contains distinctive terms so that semantic retrieval can identify it when a user asks a related question. It is sample content and should not be treated as professional, legal, medical, financial, or regulatory advice.
