

Machine Learning Fundamentals

Synthetic sample knowledge-base document for local RAG testing

Overview

A practical overview of training data, features, labels, validation, overfitting, and evaluation.

Key Information

1. Supervised learning uses examples with known target values or labels.
2. A validation dataset helps estimate how well a model generalizes during development.
3. Overfitting occurs when a model learns training-specific patterns that do not generalize well.
4. Evaluation metrics should match the business objective and the type of prediction problem.

RAG Test Notes

This document is intentionally concise and contains distinctive terms so that semantic retrieval can identify it when a user asks a related question. It is sample content and should not be treated as professional, legal, medical, financial, or regulatory advice.
