

RAG Architecture Guide

Synthetic sample knowledge-base document for local RAG testing

Overview

Retrieval-augmented generation concepts including chunking, embeddings, retrieval, context, and generation.

Key Information

1. RAG retrieves relevant source content and provides it to a language model as context.
2. An embedding represents text as a numerical vector so semantic similarity can be measured.
3. Chunk size and overlap affect retrieval quality and context efficiency.
4. A good RAG system should reduce unsupported answers by grounding generation in retrieved evidence.

RAG Test Notes

This document is intentionally concise and contains distinctive terms so that semantic retrieval can identify it when a user asks a related question. It is sample content and should not be treated as professional, legal, medical, financial, or regulatory advice.
