

Kubernetes Basics

Synthetic sample knowledge-base document for local RAG testing

Overview

A sample introduction to pods, deployments, services, config maps, secrets, and scaling.

Key Information

1. A pod is the basic execution unit that contains one or more tightly coupled containers.
2. A deployment manages a desired number of replicas and supports controlled updates.
3. A service provides a stable network endpoint for reaching a set of pods.
4. Secrets should be handled using appropriate cluster security controls and should not be exposed in application logs.

RAG Test Notes

This document is intentionally concise and contains distinctive terms so that semantic retrieval can identify it when a user asks a related question. It is sample content and should not be treated as professional, legal, medical, financial, or regulatory advice.
