

Natural Language Processing Guide

Synthetic sample knowledge-base document for local RAG testing

Overview

Sample NLP concepts including tokenization, classification, information extraction, and language models.

Key Information

1. Tokenization breaks text into units used by a language model or NLP pipeline.
2. Text classification assigns input text to predefined categories.
3. Information extraction identifies structured facts such as names, dates, or relationships from text.
4. Language models estimate or generate sequences of tokens based on learned patterns.

RAG Test Notes

This document is intentionally concise and contains distinctive terms so that semantic retrieval can identify it when a user asks a related question. It is sample content and should not be treated as professional, legal, medical, financial, or regulatory advice.
